Art Unit: 3748

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. § 103(a) as being unpatentable over U.S. 3715885 (Schur) in view of U.S. 4196590 (Fries). Schur discloses in figure 7 a buoyancy motor comprising a conveyor 60 having buckets 64, a pair of rollers 61, 62, the lower roller is connected with an electric generator 71, a pipe 39 having a plurality of holes 43 and a nozzle 44 for sending compressed gas to generate bubbles to drive the motor. Schur does not disclose a closed end pipe. Fries is relied upon to disclose it's well known in a buoyancy machine to use a closed-end pipe 26 having holes 26a to generate bubbles to drive said motor. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to use a closed end pipe in Schur as taught by Fries for the purpose of increasing output force through the holes due to the fact that one end is closed.

Claims 2-7 are rejected under 35 U.S.C. § 103(a) as being unpatentable over U.S. 3715885 (Schur) in view of U.S. 4196590 (Fries) and JP50-136541. Schur as modified teaches all the claimed subject matter as set forth above, but does not disclose other elements such as gas supply means, guide plate, sub-guide plate .etc. JP50-13651 is relied upon to disclose it's well known in a buoyancy machine to use a gas compressor 13, guide plate 15b and sub-guide plate 15b. It would have been obvious at

Art Unit: 3748

the time the invention was made to a person having ordinary skill in the art to use a compressor, guide plate, sub-guide plate in Schur as taught by JP50-13651 for the purpose of supplying and guiding the fluid more effectively.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Johnson discloses a buoyancy motor using gas generating bubbles pipes 66.

Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Examiner Nguyen whose telephone number is (571) 272-4861. The examiner can normally be reached on Tuesday--Friday from 12:30 AM to 10:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas E. Denion can be reached on 571-272-4859. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
